MANAGEMENT GUIDELINES

- Top-end yield potential in high-yield environments.
- Plant at medium-high to high plant densities for best results.
- Avoid fields that have potential for severe gray leaf spot (GLS). Scout for GLS and treat with fungicide if economic threshold is reached.
- Good performance in continuous corn, but corn/soybean rotation is preferred.
- Well-adapted to the heat and drought stresses of the western Corn Belt.
- Timely harvest is recommended.
- Works well in ridge-till fields where residue management is needed.
- 2V709 requires no separate, structured insect refuge in the Corn Belt. The refuge required is incorporated in the bag.
